

# EMERGENCY MEDICAL RESPONDER

## What is a Emergency Medical Responder?

Emergency Medical Responders, often the first on scene of a medical emergency, are trained to provide primary emergency medical care. A First Responder helps to bridge the gap between lay person first aid or no first aid and the arrival of an Emergency Medical Technician. This 70-hour course will train the student how to safely provide medical care with little equipment by including:

- Patient Assessment
- Airway Management
- Bleeding control
- Basic Life Support
- Use of Automatic External Defibrillator
- Spinal Immobilization
- Providing care with limited amount of equipment

## Who should train as an E M R?

The EMR program is highly recommended for fire and law enforcement personnel, business and industry response teams, athletic trainers, airline and health club personnel, teachers, and life-guards. Students interested in a health care profession as a career development are encouraged. This course is however not designed for those who wish gain experience on an ambulance or in a emergency department.

Upon successful course completion, the student qualifies to be certified as Emergency Medical Responder by the National Registry of EMTs.

***This course will become the  
New Emergency Medical Responder (EMR)  
program as described in the National Educational Standards for  
EMS.***
